

Wireless buyback and recycling for financial institutions

Wireless recycling is a growing concern for financial organizations. With millions of wireless devices being retired each year, these institutions have a responsibility to ensure their devices are handled in a way that doesn't jeopardize sensitive financial information or contaminate the local environment. At the same time, many of these devices retain value that can be converted into revenue and used for technology upgrades. To properly address these issues, financial institutions need a serious partner and a proven program.

e-Cycle works with banks and financial organizations of all sizes to help them protect the security of their corporate data. We also deliver a green solution that doesn't cost you anything. In fact, we actually put money back into your telecom budget so you can reinvest in the latest wireless technology to ensure that your employees never miss a beat.

A partner for the long haul

With financial professionals relying on smartphones and tablets to perform at their best, the responsible disposal of these devices and the sensitive financial information they may contain has never been more important. But many financial institutions don't have time to worry about collecting and recycling employees' used wireless devices. At e-Cycle, our goal is to fully manage all wireless recycling and buyback issues on your behalf. We want to be your go-to partner; the one you trust now and well into the future.

A proven process

e-Cycle has created a program to manage all your wireless buyback and recycling needs. We provide financial companies of all sizes with unmatched data security through a simple, no-cost green solution. It's as easy as shipping your used devices to our facility. We even pay for the shipping on qualifying device shipments.

Recycle wireless devices at no cost

At e-Cycle, every one of your wireless devices that has outlived its market value is sorted out to be recycled. The battery is removed and sent to an EPA-registered facility to ensure its toxic materials do not end up in a landfill. The core technology, including the motherboard and all wiring, is shredded and melted down so precious metals can be reused.

Recover financial value from obsolete devices

Redeeming the resale value in used wireless devices can allow financial organizations to grow their telecom budgets and stay on top of mobile technology. e-Cycle uses the latest market pricing reports to determine the value of your equipment. We send you a check for your devices as well as a complete inventory report, detailing make, model, value and condition of the devices.

Protect sensitive data

As instances of identity theft continue to rise, we understand that data security is the first priority for financial institutions. And with more professionals accessing financial records and databases through their wireless phones and tablets, protecting the information on these devices is a critical part of these efforts. At e-Cycle, all the data on recyclable devices is destroyed and we put your resalable devices through a comprehensive data removal process to ensure that all information is deleted. After restoring the factory settings, our quality assurance team rechecks every device to make sure the data has been cleared. Many banks depend on e-Cycle to handle this often complex process.

The right partner

Working with e-Cycle is easy, secure and financially rewarding. That's why many of the world's largest organizations have chosen e-Cycle to be their long-term partner for wireless buyback and recycling. So call us today – we understand your business and want to work with you.
