

Wireless buyback and recycling for government organizations

Wireless recycling is a growing concern for government organizations at the federal, state and local levels. With millions of wireless devices being retired each year, agencies have a responsibility to ensure that the devices are retired in a way that doesn't jeopardize data security or the environment. At the same time, many of these devices retain value that can be converted into revenue. To address these issues government organizations need a serious partner and a proven program.

e-Cycle works with government agencies at all levels to deliver the industry's most stringent data security and a green solution that doesn't cost you anything. In fact, we actually put money back into your telecom budget so your employees can benefit from the latest wireless devices and accessories.

A partner for the long haul

.....

At e-Cycle, we understand that government organizations need to focus on the critical tasks at hand - and not strain already tight resources by trying to address the growing issue of wireless recycling. Our goal is to fully manage these issues on your behalf. We want to be your go-to partner; the one you trust now and well into the future.

A proven process

e-Cycle has created a program to manage all your wireless buyback and recycling needs. We provide government organizations with unmatched data security through a simple, no-cost green solution. It's as easy as shipping your used devices to our facility. We even pay for the shipping on qualifying device shipments.

Recycle wireless devices at no cost

At e-Cycle, every one of your wireless devices that has outlived its market value is sorted out to be recycled. The battery is removed and sent to an EPA-registered facility to ensure its toxic materials do not end up in a landfill. The core technology, including the motherboard and all wiring, is shredded and melted down so precious metals can be reused.

Recover financial value from obsolete devices

Redeeming the resale value in used wireless devices can allow government organizations to stay on top of mobile technology, despite tightening resources. e-Cycle uses the latest market pricing reports to determine the value of your equipment. We send you a check for your devices as well as a complete inventory report, detailing make, model, value and condition of the devices. Many federal agencies put these resources toward technology upgrades to ensure that their employees have the most advanced devices available.

Protect sensitive data

We understand that for government organizations security is a must. And as more government professionals use their wireless devices to send emails, access proprietary data bases and store confidential information, these devices present a growing security risk. At e-Cycle, all the data on recyclable devices is destroyed and we put your resalable devices through a comprehensive data removal process to ensure that sensitive and private information is deleted. After restoring the factory settings, our quality assurance team rechecks every device to make sure the data has been cleared. Many government organizations depend on e-Cycle to handle this often complex process. For some larger agencies that manually wipe information from their own devices, e-Cycle serves as an added layer of security.

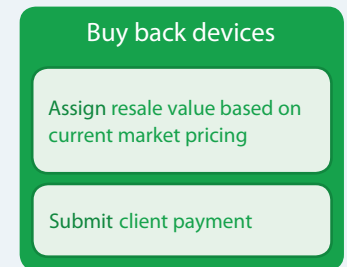

The right partner

Working with e-Cycle is easy, secure and financially rewarding. That's why many of the world's largest organizations have chosen e-Cycle to be their long-term partner for wireless buyback and recycling. So let us work with you today – we understand your needs and we support your efforts as leaders in public service.
