

Wireless buyback and recycling for healthcare organizations

Wireless recycling is a growing concern for healthcare organizations. With millions of wireless devices being retired each year, hospitals have a responsibility to ensure their wireless devices are handled in a way that doesn't jeopardize patient records or contaminate the local environment. At the same time, many of these phones retain value that can be converted into revenue. To properly address these issues, hospitals need a serious partner and a proven program.

e-Cycle works with healthcare organizations of all sizes to help them comply with HIPPA by protecting sensitive records that may be stored or accessed through smartphones. We also deliver a green solution that doesn't cost you anything. In fact, we actually put money back into your telecom budget so doctors and hospitals can benefit from the latest wireless technology.

A partner for the long haul

At e-Cycle, we understand that healthcare organizations need to focus on their patients and not be distracted by trying to manage the growing issue of wireless recycling. Our goal is to fully handle these issues on your behalf. We want to be your go-to partner; the one you trust now and well into the future.

A proven process

e-Cycle has created a program to manage all your wireless buyback and recycling needs. We provide healthcare organizations with unmatched data security through a simple, no-cost green solution. It's as easy as shipping your used devices to our facility. We even pay for the shipping on qualifying device shipments.

Recycle wireless devices at no cost

At e-Cycle, every one of your wireless devices that has outlived its market value is sorted out to be recycled. The battery is removed and sent to an EPA-registered facility to ensure its toxic materials do not end up in a landfill. The core technology, including the motherboard and all wiring, is shredded and melted down so precious metals can be reused.

Recover financial value from obsolete devices

Redeeming the resale value in used wireless devices can allow healthcare organizations to stay on top of mobile technology. e-Cycle uses the latest market pricing reports to determine the value of your equipment. We send you a check for your devices as well as a complete inventory report, detailing make, model, value and condition of the devices. Many hospitals put these resources toward technology upgrades so doctors and administrators can stay on the cutting edge of wireless technology.

Protect sensitive data

Healthcare organizations can never compromise patient records. We understand that for hospitals, security is a must. And as more doctors and hospital administrators use their wireless devices to access databases, review records and even examine x-rays, these devices present a growing security risk. At e-Cycle, all the data on recyclable devices is destroyed and we put your resalable devices through a comprehensive data removal process to ensure that sensitive and private information is deleted. After restoring the factory settings, our quality assurance team rechecks every device to make sure the data has been cleared. Many healthcare organizations depend on e-Cycle to handle this often complex process.

The right partner

Working with e-Cycle is easy, secure and financially rewarding. That's why many of the world's largest organizations have chosen e-Cycle to be their long-term partner for wireless buyback and recycling. So call us today – we understand your needs as a healthcare provider and want to work with you.
