

Wireless buyback and recycling for retail organizations

Wireless recycling is a growing concern for retail businesses. With millions of wireless devices being retired each year, these organizations have a responsibility to ensure their wireless devices are handled in a way that doesn't jeopardize sensitive information or contaminate the local environment. At the same time, many of these devices retain value that can be converted into revenue and used to upgrade to newer technology. To properly address these issues, retail organizations need a serious partner and a proven program.

e-Cycle works with retailers of all sizes to help them protect private corporate data. We also deliver a green solution that doesn't cost you anything. In fact, we actually put money back into your telecom budget so you can reinvest in the latest wireless devices and accessories for your employees.

A partner for the long haul

As more retailers use corporate-owned smartphones and tablets to stay on top of suppliers, branch locations, employees and industry trends, the responsible disposal of these devices and the information they contain is of growing importance. But retailers don't have time to worry about recycling their employees' used wireless devices. At e-Cycle, our goal is to fully manage all wireless recycling and buyback issues on your behalf. We want to be your go-to partner; the one you trust now and well into the future.

A proven process

e-Cycle has created a program to manage all your wireless buyback and recycling needs. We provide retailers of all sizes with unmatched data security through a simple, no-cost green solution. It's as easy as shipping your used devices to our facility. We even pay for the shipping on qualifying device shipments.

Recycle wireless devices at no cost

At e-Cycle, every one of your wireless devices that has outlived its market value is sorted out to be recycled. The battery is removed and sent to an EPA-registered facility to ensure its toxic materials do not end up in a landfill. The core technology, including the motherboard and all wiring, is shredded and melted down so precious metals can be reused.

Recover financial value from obsolete devices

Redeeming the resale value in used wireless devices can allow retailers to grow their telecom budget and stay on top of mobile technology. e-Cycle uses the latest market pricing reports to determine the value of your equipment. We send you a check for your devices as well as a complete inventory report, detailing make, model, value and condition of the devices.

Protect sensitive data

We understand that retail businesses need to ensure the security of proprietary corporate data as well as the privacy of their employees. Protecting the data on wireless devices needs to be an important part of these efforts. At e-Cycle, all the data on recyclable devices is destroyed and we put your resalable devices through a comprehensive data removal process to ensure that sensitive and private information is permanently deleted. After restoring the factory settings, our quality control assurance rechecks every device to make sure the data has been completely cleared. Many retailers depend on e-Cycle to handle this often complex process.

The right partner

Working with e-Cycle is easy, secure and financially rewarding. That's why many of the world's largest organizations have chosen e-Cycle to be their long-term partner for wireless buyback and recycling. So call us today – we understand your business and want to work with you.
