

e-Cycle Process

e-Cycle Data Deletion

e-Cycle is a trusted partner to thousands of global organizations, including a majority of the Fortune 1,000. We work with all industries, including government, financial, education, energy, healthcare and others.

The average wireless device contains 2-4 GB of potentially sensitive data that comprises very real security risks. For every reusable device, e-Cycle removes all data and restores the factory settings. These devices are then thoroughly audited for quality assurance. Non-reusable devices are shredded on-site to destroy all data.
